

NC STATE UNIVERSITY

Hay Harvest Costs, Large Round Bales: Estimated annual revenue, operating cost, fixed cost and net returns per acre at one ton of dry matter per acre yield.

Budget 84-2
July-08

Description	Unit	Price	Quantity	Value	Your Farm
Operating inputs					
-Baling Twine	Ball	\$15.00	0.06	\$0.90	
-Bale Net Wrap	9,840' Roll	\$220.00	0.00	0.00	
-Other:				0.00	
-Other:				0.00	
-Machinery Labor (From Table 2)				19.83	
-Other Labor	Hours	\$9.00	0.00	0.00	
-Machinery Fuel, Maint, Repairs (Table 2)	Acre			28.14	
-Annual Operating Capital ^a	\$	7.5%	24.44	1.83	
Total Operating Costs				\$50.71	
Fixed Costs					
			Amount	Value	
-Machinery Depreciation, Taxes, Insurance, and Interest (From Table 1)				27.14	
Total Cost				\$77.85	
Production					
	Unit	Price^b	Quantity	Value	
-Harvested as Hay, Dry Matter	Ton	\$0.00	1.00	0.00	
Total Receipts				\$0.00	
RETURNS ABOVE TOTAL OPERATING COST				-\$50.71	
RETURNS ABOVE ALL SPECIFIED COSTS^c				-\$77.85	

^a Interest on operating expenses for an average of 6 months.

^b Only include a price if hay is being made as a custom hay making enterprise.

^c This is the cost of harvesting hay when producing hay for your own use.

NOTES

Budget does not include cost of producing the hay crop.

A yield per cutting of one ton of dry matter is equal to 1.18 tons of well cured hay at 85% dry matter (15% moisture).

Multiply the dry matter cost shown in this budget by the hay dry matter % to convert the DM cost to the cost of hay as made. E.g., \$77.85/DM ton X 0.85 = \$66.17/ton of hay.

Divide the sale price of hay as made by the dry matter % to convert this hay price to a price per ton of dry matter.

Budget includes moving bales from the field to a storage site. Cost of storage is not included.

Budget prepared by:

J.T. Green, Jr., Crop Science Extension Specialist, NCSU (Retired).

^a Depreciation = (Initial cost - Salvage value) / years of life

^b Interest on investment = ((Initial cost + Salvage value) / 2) X interest rate

^c Combined rate of property taxes and insurance premiums as a percentage of the average investment

^d Per acre costs for self-propelled vehicles include an additional 10% allowance for travel time from farm to field

^e Total number of trips across the field per year for this operation

^f Establishment cost per acre from Budget 87-7, net of any revenue. Land cost or charges are not included.

^a Repairs and maintenance costs are calculated as a % of the initial cost in Table 1. Percentages are higher for equipment bought used.

^b Repairs and maintenance costs per hour based on annual use shown in Table 1.

^c Total fuel cost plus lube costs estimated as 15% of the fuel cost.

^d Per acre costs for tractors and other self-propelled equipment includes an additional 10% allowance for travel time from farm to field.

^e Labor cost per acre includes an additional 15% allowance for travel time, setting up and finishing up.

Table 3. Sensitivity Analysis

This table shows the total cost per ton of dry matter harvested under various assumptions about costs and yield per cutting.

Specifically, the cost and yields shown in the enterprise budget on the first page are believed to be fairly representative of conditions in North Carolina. However, there is a wide variation in conditions from one farm to another and costs and yields can vary from year to year. The table shows the effects of yields and costs that are 10 percent higher or lower than the basic budget, singly and in combination.

AVERAGE TOTAL COST PER TON OF DRY MATTER HARVESTED

		YIELD		
		-10%	Base Budget	+10%
COST	-10%	\$77.85	\$70.07	\$63.70
	Base	\$86.50	\$77.85	\$70.77
	+10%	\$95.15	\$85.64	\$77.85
